

# PREPARING FOR WINTER

HOW WE CAN HELP.

Staying comfortable and safe this winter is as easy as planning ahead. Go through the cold weather preparation checklist:

#### PROPANE SUPPLY

Make sure you have an adequate propane supply. Ask your propane provider about payment programs and scheduling regular visits so there's always enough propane in your tank. This will help you avoid running empty if inaccessible roads delay deliveries.

#### PROPANE GAS DETECTOR

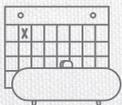

Consider installing UL-listed propane gas detectors and carbon monoxide detectors for additional security. Always follow the manufacturer instructions for installation, location, and maintenance.

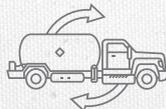

#### PROPANE GENERATOR

Consider purchasing a propane generator. When other power sources fail, a propane generator can keep your house operating without interruption.

# APPLIANCE EFFICIENCY TIPS

Millions of homeowners enjoy the unmatched comforts of gas appliances year-round, thanks to clean, American-made propane. Be sure your propane appliances are running at optimum efficiency by taking advantage of these tips.

## COOKING

If you're in the market for a new propane oven, choose an Energy Star-certified model, which uses less energy than standard models.

## WATER HEATING

Make sure your water heater is set no higher than 120 degrees Fahrenheit to continue saving half of what you'd pay for electric.

## HOME HEATING

To keep your furnace running efficiently, bring in a professional to perform annual maintenance. You can also install a programmable thermostat in your home to save on yearly heating costs.

## CLOTHES DRYING

Be diligent about keeping the lint filter in your clothes dryer clean. A dirty filter can restrict airflow and even become a fire hazard.
